SI 539 Fall 2026 Client Proposal - Mobile Deliverable

Student Resource Portal - Deliverable #1 HTML & Content

Date:

Project Purpose

The UMSI Engaged Learning Office (ELO) facilitates transformational engaged learning experiences for the School of Information and enables innovative, sustainable, and mutually-beneficial information solutions for local and global communities.

In order to meet this mission, the ELO seeks to improve its web presence by designing a new website to help students understand and locate resources available to them for their engaged learning courses and programs.

1. The website should function as a guided learning resource rather than simply a repository of links and documents for students.
2. The new site will feature an accessible and responsive design that works on multiple devices, a modern look and feel, and a refreshed site architecture and site content.
3. The target user of this website is a UMSI undergraduate or graduate student—you might build yours specifically for a BSI/MSI student, **but this is not required**.
4. The new website will be built using HTML5, CSS3, and JavaScript and will be hosted on Github.

Our Commitment:

Deliverable #1 - HTML & Website Content

- This will include all of the content in multiple structured html files - this includes all text (including alt text) and images.
- This will not be a styled website as we want to start with semantic structure first and ensure that we have the content we need to make the site successful
- This website will be fully accessible and will pass accessibility validators such as WAVE and Axe.

Meets Client's Objectives

Explain what content you chose (text, images, etc) for your website and how it how it meets the ELO's objectives for a new website to help students understand and locate resources available to them for their engaged learning courses and programs:

I built four pages that follow the lifecycle of an engaged learning experience rather than presenting a flat list of links. The homepage introduces the ELO and its mission, includes an embedded ELO video, and gives students entry points into each stage of their experience. "Preparing for Your Experience" and "Starting Your Experience" walk students through the reflection, goal-setting, relationship-building, and planning work that the ELO identifies as critical before and at the beginning of a project. For the fourth page I created "Find Your Engaged Learning Opportunity," which organizes real ELO opportunities (client-based courses, engaged learning programs, entrepreneurship, research,

study abroad, and Exposition) by student goals such as "work with real organizations" or "solve a real-world challenge." I chose text content drawn from the ELO's own proposal and website, real opportunity links pulled directly from the ELO site, impact statistics (nearly 100% of students, 239 projects, 190 clients), and student success stories. This meets the ELO's objective of providing a single accessible location where students can understand and locate resources, showcases the breadth of what the office offers, and helps students find what they need by goal rather than duplicating resources across experience types.

Explain how you chose to structure your content using appropriate semantic html and why you organized it that way.

Every page uses the same semantic structure: a `<header>` containing the site logo, a `<nav>` with an unordered list of links to all four pages, and the page `<h1>`; a `<main>` landmark holding the primary content; and a `<footer>` with contact and copyright information. Within `<main>`, I grouped related content into `<section>` elements, each introduced by an `<h2>`, and used `<article>` elements for self-contained items such as individual programs or student stories. I used `<ul>` and `<ol>` for lists depending on whether order mattered, and an `<aside>` for supplementary content like the newsletter signup. I kept a strict, logical heading order (h1 → h2 → h3, with no skipped levels) so the document outline is clear. I organized it this way because semantic elements communicate the meaning and hierarchy of the content to browsers, assistive technology, and future developers who will add CSS in later deliverables - starting from correct structure makes the site easier to style responsively and keeps it accessible from the ground up.

Explain how you ensured that your site is fully accessible and usable for all students - including those with different disabilities.

I included a "Skip to Main Content" link as the first element in the body of every page, targeting the `id="main"` on the `<main>` element, so keyboard and screen-reader users can bypass the repeated navigation. Every image has descriptive alt text that conveys its meaning rather than a generic label. I used semantic landmarks (`header`, `nav`, `main`, `footer`) so assistive technology can navigate the page by region, and a correct heading hierarchy so screen-reader users can move through the content by heading level. All links use descriptive link

text that makes sense out of context. I validated every page with the W3 HTML validator, WAVE, and aXe and resolved the errors they reported so the pages pass without accessibility violations.

Explain how your design makes it easy for students to find resources and understand how to utilize them.

Instead of a single repository of links, the site is organized around the student's journey and goals. Consistent navigation on every page lets students move between stages at any time. The homepage orients students and points them to the right starting place, the Preparing and Starting pages give step-by-step guidance and grouped resources for those stages, and the "Find Your Engaged Learning Opportunity" page lets a student start from what they want to do ("work with real organizations," "explore beyond Ann Arbor") and follow one link to the matching ELO program. Each resource link is accompanied by a short description explaining what it is and how to use it, so students understand the resource before clicking. This goal-based organization reduces the time students spend searching and helps them find the right resource when they need it.

Project Cost for Deliverable #1 Mobile Website

Item	Hours	Price	Total
Accessibility Testing	1	$110/hour	$110
Accessibility Fixes	1	$110/hour	$110
Choosing Content for site	2	$110/hour	$220

Skip to Main	1	$110/hour	$110
Structuring Navigation across the site in html	1	$110/hour	$110
Organizing Main content in html	3	$110/hour	$330
Other see below*	1	$110/hour	$330
Total Costs:			$1320

* If there are other items you worked on for the website outside of what was listed in the Project Costs

Project Costs for Other include:

- Sourcing and verifying real links from the ELO website

Appendix

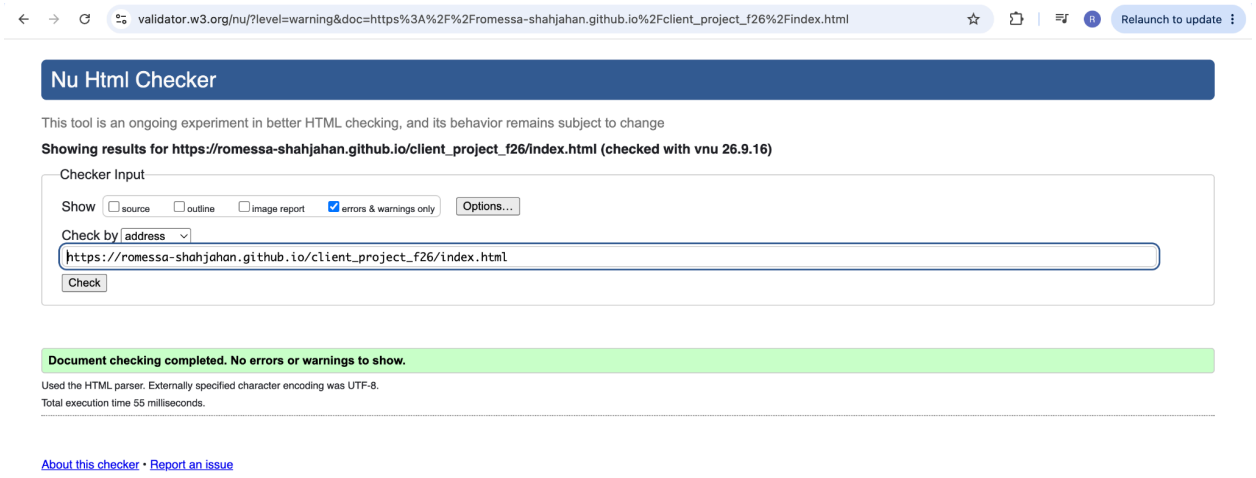

Appendix A: Accessibility Validation

[include screenshots here of every page of your live site run through the W3 Validator, WAVE, & Axe]
